

Introduction

Topic : Digital Literacy

Name : Yug Parmar

Reg Number : 25BCE10639

Date of submission : 26-03-2026

University : Vellore Institute of Technology Bhopal

TASK 1

I created an infographic to explain the concept of Digital Literacy and its importance for students in the modern digital world. The infographic includes three main topics: Digital Literacy, Useful Digital Tools for Students, and Safe Internet Practices. The purpose of this infographic is to present important information in a simple and visually attractive way so that students can easily understand it.

In the Digital Literacy section, I explained that digital literacy means the ability to use digital devices, the internet, and online platforms safely and effectively. In the Useful Digital Tools section, I included tools such as Google Docs, Canva, GitHub, and Google Drive, which help students in creating documents, presentations, coding, and storing files online. In the Safe Internet Practices section, I explained the importance of strong passwords, avoiding suspicious links, protecting personal information, and using secure websites.

This task helped me understand how to present information visually and improved my skills in digital communication. I used Canva to design the infographic, which made the design process simple and effective. This task improved my creativity and digital skills.

TASK 2

I created my digital portfolio by registering on professional and technical platforms including GitHub, LinkedIn, and Kaggle. These platforms are very important for students who are pursuing careers in technology and engineering. GitHub is used to upload and manage coding projects, LinkedIn is used to create a professional profile and connect with professionals, and Kaggle is used for data science and machine learning projects and competitions.

I uploaded my AI Expense Splitter project on GitHub to showcase my work and technical skills. On LinkedIn, I created a professional profile including my education, skills, and interests in Artificial Intelligence and Machine Learning. On Kaggle, I explored datasets and notebooks related to machine learning, which will help me improve my knowledge in data science.

This task helped me understand the importance of building a professional online presence. These platforms will help me in the future to showcase my projects, apply for internships, participate in competitions, and connect with other professionals. Creating a digital portfolio is an important step for career development in the technology field.

TASK 3

I created an account on a coding platform and solved a beginner-level programming problem. I selected HackerRank as my coding platform because it is widely used by students and companies for programming practice and skill development. After creating my account, I explored the platform and solved a basic problem to understand how online coding platforms work. This task helped me improve my problem-solving skills and understand how coding assessments are conducted on such platforms. These platforms are useful for preparing for technical interviews and improving programming knowledge.

In the second part of this task, I created a Google Form based on Digital Literacy. The form included five questions related to topics such as internet safety, digital tools, online communication, and cyber security. I shared the form with a few friends and collected their responses. I then viewed the responses in Google Sheets to analyze the results.

This task helped me learn how to use online platforms for coding practice and how to create online surveys using Google Forms. It also improved my digital literacy and technical skills.

TASK 4

I learned about email etiquette and professional digital communication. Email etiquette is important because emails are commonly used for communication in colleges, universities, and companies. A professional email should include a clear subject line, proper greeting, polite language, and a proper closing with the sender's name and details. I wrote two professional emails: one to a professor requesting an assignment extension and another to a company requesting an internship opportunity.

I also created a list of social media do's and don'ts. Some important do's include using respectful language, checking grammar before posting, and maintaining a professional profile. Some don'ts include sharing personal information, posting offensive content, and spreading misinformation.

This task helped me understand the importance of professional communication and maintaining a good digital presence online.

TASK 5

I studied cybercrime and learned about online fraud and safety measures. I selected UPI fraud as my case study because it is very common in India. UPI fraud happens when scammers trick people into sharing their OTP, UPI PIN, or by sending fake payment links. Many people lose money because they are not aware of these scams.

To prevent cybercrime, we should never share OTP or UPI PIN with anyone, avoid clicking on unknown links, verify QR codes before scanning, use strong passwords, and enable two-factor authentication. If someone becomes a victim of cybercrime, they should immediately report it on the official cybercrime website cybercrime.gov.in or call the helpline number 1930.

This task helped me understand cyber safety, online fraud risks, and how to stay safe while using digital payment systems and the internet.

Conclusion

This Digital Literacy project helped me understand the importance of using digital tools effectively and responsibly. Through different tasks, I learned how to create an infographic, build a professional online portfolio, explore coding platforms, and use Google Forms for collaboration. I also learned the importance of professional communication through email etiquette and gained awareness about cybercrime and online safety. These skills are very important for students in today's digital world. This project improved my technical knowledge, communication skills, and awareness about online security, and it will help me in my academic journey and future career.
